### Special Note: FEED YARD REPORT

SOUTHWEST: The average paid by feedlots on April 1 for alfalfa ground and delivered was \$317.45, up \$7.38 from the previous month, usage was 626T/day, down almost 8% and total usage was 19,407T.

SOUTH CENTRAL: The average paid by feedlots on April 1 for alfalfa ground and delivered was \$266.35, down \$1.53 from the previous month, usage was 266T/day, down nearly 8% and total usage was 7,519.5T.

Compared to the last report demand remains good, prices remained steady, trade activity remains slow. Not much new to report. Kansas remains dry and the wind continues to blow. As one producer put it "even the jack rabbits are carrying canteens". There is a very real sense of concern for this year's hay crop across the state and several producers have stated they have lost partial stands of alfalfa. Adding insult to injury, weevil and cut worms are making themselves known. According to the U.S. Drought Monitor for April 11th, deterioration occurred in the southern extent of the region in Kansas where both short and long-term precipitation deficits exist (ranging from 4 to 16 inches during the past 12-month period). Moreover, other drought-related indicators, such as surface and root zone soil moisture, are showing very low moisture levels (ranging from the 2nd to the 20th percentile) across Kansas as well as much of Nebraska, according to NASA Short-term Prediction Research and Transition Center (NASA SPOrT). Abnormally dry conditions (D0) decreased to near 7%, moderate drought (D1) increased to near 12%, severe drought (D2) remained near 13%, extreme drought (D3) decreased to 13%, and exceptional drought (D4) increased to near 43.5%.
