Direct Hay Weighted Average Report for week ending 4/28/2023

Volume			
	This Week	Last Reported (4/17/2023)	Last Year
Tons:			
Hay	18328	21920	23187
Straw	300	300	3823
Total	18628	22220	27010
Bales:			
Hay	253	253	33
Total	253	253	33

Please Note: The above volumes (tonnage, acres, and bales) listed on this USDA LPGMN report are for confirmed trades only, it does not include estimated volume (tonnage) for bids or offers to the trade.

Compared to the last report demand remains good, prices remained steady, trade activity remains slow. Some good news was received last week by many and it came in the form of liquid precipitation! According to the Office of the State Climatologist, the highest totals were in Washington, Marshall and Nemaha Counties, where six CoCoRaHS observers all recorded over 2" of rain, with one observer in Waterville in Marshall County receiving 2.98", the highest total in the state. Although the rain is far below what is needed to climb out of the grips of the drought, it is, hopefully, a start. According to the U.S. Drought Monitor for April 25th, In the Great Plains from central and western South Dakota southward through Kansas, the continued lack of substantial rainfall led to intensification over a relatively large part of these areas. In particular, D3 expanded through most of central Nebraska, and lesser expansion of D3 and D4 reported in central Kansas. The Department of Agriculture reported 62 percent of Kansas winter wheat in poor or very poor condition, as was 42 percent of Nebraska winter wheat. The categorical percent area for Abnormally dry conditions (D0) remained near 7%, moderate drought (D1) remained near 11%, severe drought (D2) decreased to near 11%, extreme drought (D3) increased to 14%, and exceptional drought (D4) increased to near 46%.
