Current Midwest Drought Summary (April 25, 2023)

Most of the Midwest Climate Region remained free of dryness and drought, confined to areas from Minnesota southward through Missouri, plus a small patch in west-central Illinois. Declining conditions in Missouri and adjacent Iowa led to a broad expansion of moderate drought (D1) in a swath through the middle of Missouri, and a few smaller locales in adjacent areas. In contrast, moderate to heavy precipitation and significant snowmelt led to improvements from northern and western Iowa northward through southern Minnesota.
