Direct Hay Weighted Average Report for week ending 6/2/2023

	Volume		
	This Week	Last Reported (5/15/2023)	Last Year
Tons:			
Hay	50	525	0
Total	50	525	0

Please Note: The above volumes (tonnage, acres, and bales) listed on this USDA LPGMN report are for confirmed trades only, it does not include estimated volume (tonnage) for bids or offers to the trade.

Special Note: ** Next report will be in two weeks on June 15 **

Compared to last report all reported forages sold steady on a thin test. Very limited supply of old crop hay still available. Who would have thought most of the state would be wet, so wet in some areas that producers cannot get first cutting of alfalfa down let alone think of it drying. There will be a day in near future where it will all work out. Per NASS: barley emerged is at 80%, corn planted at 91%, edible beans 31% planted, sugarbeets emerged at 67%.

All prices FOB the field or hay barn unless otherwise noted.
