

FEDERAL MILK ORDER PRICE AND POOL SUMMARY, JUNE

HIGHLIGHTS. Handler reports of receipts and utilization under the Federal milk order system for June have been filed and tabulated. Combined totals for the 11 consolidated orders are being released. During June, about 9.5 billion pounds of milk were received from producers. This volume of milk is 0.2 percent higher than the adjusted June 1999 volume. Slightly more than 3.6 billion pounds of producer milk were used in Class I products, 2.4 percent higher than the previous year. Calendar composition likely had a positive impact on milk used in Class I in 2000 as compared to 1999. The all-market average Class utilization percentages were; Class I – 38, Class II – 11, Class III - 45, and Class IV – 6. The weighted average statistical uniform price (blend price under old pricing system) was \$12.19 per cwt., \$0.25 more than last month, and \$0.64 less than last year.

1/ Names in parentheses are principal pricing points of markets.

2/ Previous year figures are the simple summation of the data for the orders that were consolidated. For those orders that also include partial marketing area changes or the addition of unregulated area, the figures for the previous year were adjusted for these changes; in some cases these adjustments are based on estimated data. No adjustments to previous year figures were made for handler regulation shifts that result from other than marketing area changes. Also in June 1999, there was milk not pooled due to disadvantageous price relationships.

3/ Statistical uniform price for component pricing orders (Class III price plus producer price differential). For other orders, uniform skim milk price times 0.965 plus uniform butterfat price times 3.5.

4/ Due to a disadvantageous relationship between class prices and the location adjusted statistical uniform (blend) price in some markets, handlers elected not to pool milk that normally would have been associated with these markets.
