

FEDERAL MILK ORDER MARKETING AND UTILIZATION SUMMARY, APRIL

HIGHLIGHTS. Handler reports of receipts and utilization under the Federal milk order system for April have been filed and tabulated. Combined totals for the 10 consolidated orders are being released. During April, about 10.7 billion pounds of milk were received from producers. This volume of milk is 1.5 percent higher than the April 2008 volume. In April 2009, there were significant volumes of milk not pooled due to intraorder disadvantageous price relationships. About 3.8 billion pounds of producer milk were used in Class I products, 0.8 percent higher than the previous year. The timing of the Easter season, as well as calendar composition, likely had a negative impact on milk used in Class I in 2009 as compared to 2008. The all-market average Class utilization percentages were: Class I = 35%, Class II = 12%, Class III = 41% and Class IV = 13%. The weighted average statistical uniform price was \$11.63 per cwt., \$0.49 higher than last month and \$6.45 lower than last year.

1/ Names in parentheses are the major city in the principal pricing point of the market.

2/ Statistical uniform price for component pricing orders (Class III price plus producer price differential). For other orders, uniform skim milk price times 0.965 plus uniform butterfat price times 3.5.

3/ Due to a disadvantageous relationship between intraorder class prices and the location adjusted statistical uniform price in these markets, handlers elected not to pool an estimated 180 million pounds of milk that normally would have been associated with these markets. In April 2008, there was no milk not pooled due to disadvantageous price relationships. After adjusting for not-pooled milk, the year-to-year percent change is +3.2%.
