

FEDERAL MILK ORDER PRICE AND POOL SUMMARY, FEBRUARY

HIGHLIGHTS. Handler reports of receipts and utilization under the Federal milk order system for February have been filed and tabulated. Combined totals for the 10 consolidated orders are being released. During February, about 9.8 billion pounds of milk were received from producers. This volume of milk is 1.4 percent lower than the February 2009 volume. In February 2010, there were significant volumes of milk not pooled due to intraorder disadvantageous price relationships. About 3.6 billion pounds of producer milk were used in Class I products, 0.5 percent lower than the previous year. The all-market average Class utilization percentages were: Class I = 36%, Class II = 10%, Class III = 43% and Class IV = 11%. The weighted average statistical uniform price was \$15.59 per cwt., \$0.06 lower than last month and \$4.53 higher than last year.

1/ Names in parentheses are the major city in the principal pricing point of the market.

2/ Statistical uniform price for component pricing orders (Class III price plus producer price differential). For other orders, uniform skim milk price times 0.965 plus uniform butterfat price times 3.5.

3/ Less than 0.5 percent.

4/ Due to a disadvantageous relationship between intraorder class prices and the location adjusted statistical uniform price in these markets, handlers elected not to pool an estimated 150 million pounds of milk that normally would have been associated with these markets. In February 2009, the estimated not pooled volume of milk was 50 million pounds, occurring in Order Nos. 030 and 032. After adjusting for not-pooled milk, the year-to-year percent change is -0.4%.
