

FEDERAL MILK ORDER MARKETING AND UTILIZATION SUMMARY, NOVEMBER 2013

HIGHLIGHTS. Handler reports of receipts and utilization under the Federal milk order system for November have been filed and tabulated. Combined totals for the 10 consolidated orders are being released. During November 2013, more than 10.4 billion pounds of milk were received from producers. This volume of milk is 16.7 percent higher than the November 2012 volume. In November 2012 and November 2013, there were volumes of milk not pooled due to intraorder disadvantageous price relationships. More than 3.6 billion pounds of producer milk were used in Class I products, 3.6 percent lower than the previous year. Class I utilization was lower in 9 of the 10 Federal Order areas. The all-market average Class utilization percentages were: Class I = 35%, Class II = 10%, Class III = 47% and Class IV = 7%. The weighted average statistical uniform price was \$20.43 per cwt., \$0.47 higher than last month and \$0.72 lower than last year.

1/ Names in parentheses are the major city in the principal pricing point of the market.

2/ Statistical uniform price for component pricing orders (Class III price plus producer price differential). For other orders, uniform skim milk price times 0.965 plus uniform butterfat price times 3.5.

3/ Due to a disadvantageous relationship between intraorder class prices and the location adjusted statistical uniform price in these markets, handlers elected not to pool an estimated 463.2 million pounds of milk that normally would have been associated with these markets. In November 2012, the estimated not pooled volume of milk was 1.833 billion pounds, occurring in order numbers 030, 032, 033, 124, 126, and 131. After adjusting for non pooled milk, the year-to-year percent change is -1.2%.
