

**FEDERAL MILK ORDER MARKETING AND UTILIZATION SUMMARY, JUNE 2014**

**HIGHLIGHTS.** Handler reports of receipts and utilization under the Federal milk order system for June have been filed and tabulated. Combined totals for the 10 consolidated orders are being released. During June, more than 11 billion pounds of milk were received from producers. This volume of milk, on a percentage basis, is the same as the July 2013 volume. In June 2013 and June 2014, there were volumes of milk not pooled due to intraorder disadvantageous price relationships. More than 3.1 billion pounds of producer milk were used in Class I products, 0.9 percent lower than the previous year. The all-market average Class utilization percentages were: Class I = 28%, Class II = 11%, Class III = 50% and Class IV = 11%. The weighted average statistical uniform price was \$23.28 per cwt, \$0.97 lower than last month and \$3.88 higher than last year.

1/ Names in parentheses are the major city in the principal pricing point of the market.

2/ Statistical uniform price for component pricing orders (Class III price plus producer price differential). F or other orders, uniform skim milk price times 0.965 plus uniform butterfat price times 3.5.

3/ Due to a disadvantageous relationship between intraorder class prices and the location adjusted statistical uniform price in these markets, handlers elected not to pool an estimated 910.9 million pounds of milk that normally would have been associated with these markets. In June 2013, the estimated not pooled volume of milk was 535.2 million pounds, occurring in the same orders, orders 030, 032, 033, and 126. After adjusting for non pooled milk, the year-to-year percent change is -3.1%.
